SUMMARY

This report presents the development of the operational version of the Air Force Occupational Attitude Inventory (OAI). The OAI is a key element to the first two steps in a comprehensive long-term job satisfaction-research project being conducted by the Occupation and Manpower Research Division of the Air Force Human Resources Laboratory. The two steps are "...(a) define the dimensions of job satisfaction operating in the Air Force work environment, and (b) measure job satisfaction levels on these dimensions. ..(Gould, 1976)." Phase one of the OAI development hypothesized the relevant dimensions and produced an item pool and a scale to measure those dimensions. The first phase was conducted by Tuttle, Gould, and Hazel (1975). The second phase is covered by this report and validates the original hypothesized dimensions through empirical analyses, reduces the item pool to a manageable size, evaluates and changes the measurement scale, and revalidates the dimensions of job attitude operating in the Air Force work environment using the modified measurement scale and a greatly reduced number of job attitude items. The second phase also includes identification of background history items related to job attitudes and likely to be of value as concomitant or covariables in analyses of job attitudes.

The experimental version of the OAI contained 55 life history information items and 11 current work status items in the Background Information Section and 348 work specific items in the Job Attitude Section. The 348 items had been written to measure 35 hypothesized dimensions or facets of job satisfaction—dimensions identified through extensive reviews of the civilian job satisfaction literature or hypothesized by the authors to exist in the military work environment. The initial OAI was administered to a random sample of 3,100 airmen and responses of 1,340 first-term airmen were subjected to a principal components factor analysis with varimax rotation. Analyses were restricted to first-term airmen since they represented the group with the greatest job dissatisfaction and the target population for most subsequent job attitude research. Thirty-five factors were obtained, but only 15 of the hypothesized factors were replicated, and the factor structure differed markedly from that reported by numerous studies conducted in civilian environments. Essentially, separate facets of the work performed, such as Interest, Importance, Responsibility, Variety, and Achievement, found in the civilian environment collapsed into a single factor—the Work Itself. Further, normal civilian single factors, such as Policies and Procedures and Pay and Benefits, separated into multiple, highly specific factors. In short, the military work environment and facets relating to job satisfaction were found to differ substantially from their civilian counterparts.

The 348-item pool was excessive for an operational instrument, so a computing algorithm was developed which selected the minimum subset of items that captured the domain of reliable job attitude variance measured by the full set of 348 items (Gould & Christal, 1976). As is explained in the report, traditional factor analytic procedures for selecting items were inappropriate for the item reduction task, primarily because they select redundant common variance items while eliminating items contributing unique variance. Further, Tuttle, Gould, and Hazel (1975) had previously supported the argument that job satisfaction studies aimed at specifying remedial actions rather than identifying general problems required the use of highly specific job aspect statements instead of factor scores. Application of the algorithm resulted in selection of 200 items for the final version of OAI. Multiple linear regression techniques were used to identify background variables related to job attitudes, and those related were removed from the Background Information Section. Distributions of item responses showed most items had a somewhat skewed rectangular distribution. The 8-point attitude scale was modified to 9 points and included a neutral response option in an attempt to have a scale that provided more normally distributed responses.

The modified OAI was administered to a random sample of 10,000 airmen, and the results obtained from 5,089 first-term airmen airmen were analyzed to revalidate the original findings of job attitude factor structure in the Air Force work environment. The obtained 35-factor structure essentially replicated the first factor analysis. One clear finding from both factor analyses was that civilian sector and military personnel have different perspectives of their work environments. Job attitude related research conducted in one environment must be validated in the other before attempting to apply or make generalizations from the results. Specifically, results here support a requirement to use a job attitude inventory developed for the military setting rather than using established civilian inventories. It is likely that for active duty military personnel, the work environment has a more pronounced interaction with their total life space; hence, components of the work environment take on different meanings than for civilian workers. For those readers familiar with recent discussions as to whether the military is an occupation or an institution (Moskos, 1976), these findings support the Institutional Model where the military job is part of a total life style rather than a unique component of the job incumbent's life.

PREFACE

This research was conducted under Project 7734, Development of Methods for Describing, Evaluating, and Structuring Air Force Occupations; Work Unit 77340504, Development of an Instrument for Assessing Levels of Job Satisfaction. Instrument development proceeded in three phases. Phase I developed an experimental Occupational Attitude Inventory (OAI) as documented by AFHRL-TR-75-1. This report, Phase II, describes development and validation of an operational OAI to be used to collect job attitude predictor and criterion data for Air Force management and research programs. The next phase, Phase III, will describe Air Force job attitudes as measured by the OAI.

Recognition must be given to Dr. Raymond E. Christal and Dr. Joe T. Hazel for their instrumental roles in directing research conducted under task 773405.

AIR FORCE OCCUPATIONAL ATTITUDE INVENTORY DEVELOPMENT

I. INTRODUCTION

With a long-range goal of full utilization of personnel, retention of qualified personnel, maintenance of critical skills, and increased productivity, the Air Force Human Resources Laboratory's Occupation and Manpower Research Division has developed a comprehensive plan for job satisfaction research as one step toward reaching the goal. The basic steps of the plan are to "(a) define the dimensions of job satisfaction, (b) measure satisfaction levels on these dimensions, (c) identify problem areas which have the greatest potential for improvement through satisfaction research, (d) measure the effects which specific changes in job content have on job attitudes, and (e) implement job reengineering actions and measure their effects on job attitudes, job performance, and eventual reenlistment decisions" (Gould, 1976, p. 3). The first two steps required that an inventory be developed to measure the dimensions of job satisfaction operating in the Air Force work environment. Phase one of that development hypothesized the relevant dimensions and produced items and a scale to measure those dimensions (Tuttle, Gould, & Hazel, 1975). This report covers the second phase of the inventory development including validation of the hypothesized dimensions, examination of the rating scale, and reduction of the item pool to the minimum subset of items required to measure the domain of job attitudes present in the Air Force work environment.

II. INITIAL DEVELOPMENT OF THE OCCUPATIONAL ATTITUDE INVENTORY

Tuttle et al. (1975) described the initial development of the Air Force Occupational Attitude Inventory (OAI). After an extensive review of the satisfaction dimensions reported in the civilian literature and the addition of other facets believed to be present in the Air Force work environment, 35 potential satisfaction dimensions were hypothesized. Items were written for each facet, resulting in a final pool of 348 items or approximately 10 items per facet. Table 1 lists the hypothesized dimensions and the number of items written for each. The full list of 348 items is included in Appendix A and could serve as an item pool source for those interested in developing their own job attitude instrument for use in a specific military job environment.

An extensive review of job attitude empirical studies indicates that job satisfaction and dissatisfaction represent opposite ends of a single bipolar continuum rather than separate satisfaction and dissatisfaction dimensions as proposed by Herzberg (1966). Therefore, a single 8-point rating scale anchored at each point by verbal definitions ranging from Extremely Dissatisfied to Extremely Satisfied was constructed for use with the inventory items; the scale is shown in Table 2 and will be discussed in more depth in a subsequent section of this report. To overcome difficulties associated with interpreting an ambiguous neutral point, the rating scale developed forced the respondent into a positive or negative response by using an even number of scale points. For a more detailed description of the experimental version of the OAI, the reader is referred to Tuttle et al. (1975).

6 = Moderately Satisfied	6 = Slightly Satisfied
7 = Very Satisfied	7 = Moderately Satisfied
8 = Extremely Satisfied	8 = Very Satisfied
	9 = Extremely Satisfied

III. VALIDATION OF HYPOTHESIZED FACETS OF JOB SATISFACTION

Preliminary analyses of the attitude instrument were made to validate the hypothesized satisfaction dimensions operating in the Air Force work environment. The experimental inventory was administered to a random sample of 3,100 airmen. Since job satisfaction problems occur primarily with airmen in their first year of enlistment, the initial analyses concentrated on first-term airmen. This eliminated 18 supervisory items from many of the analyses because few first-term airmen serve as supervisors.

Using a random sample of 1,340 first-term airmen, a principal components factor analysis with varimax rotation of the responses to 330 items resulted in the 35 factors shown in Table 3. The factors are not entirely the same 35 dimensions hypothesized in the development of the inventory, and in fact, only 15 of the 35 were substantially replicated. Table 4 summarizes the differences between the hypothesized facets and empirically derived job satisfaction factors. For example, hypothesized work dimensions, such as

^aItems for the hypothesized Supervisory Duties dimension were not included in the factor analysis.

Achievement, Importance, Interest, Job Design, Responsibility, Job Change, Utilization of Abilities, and Variety, are all represented by one new factor—the Work Itself. Similarly, the items written for Performance Evaluation, Supervision Received (technical), and Supervision Received (human relations) are now represented by one factor, Supervisor's Competence.

While the items of the aforementioned dimensions combined to form single factors, the items in the hypothesized facet of Air Force and Unit Policies and Practices divided into five separate factors, Pay and Benefits items formed four factors, and Activity and Social Status items each formed two. Five new factors were found which took items from multiple sources although the primary source was identifiable.

In summary, several hypothesized separate facets of the work (or tasks) performed combined to form a single work factor while a generalized Air Force policies dimension separated into several specific factors. This finding is a departure from those of the better known civilian job satisfaction inventories, such as the Minnesota Satisfaction Questionnaire (Weiss, Dawis, England, & Lofquist, 1967), where most of the work facets represent independent factors. These results further support the requirement to use an inventory developed for the military setting rather than using established civilian inventories. The military work environment and facets relating to job satisfaction do differ substantially from their civilian counterparts. It is quite possible that, for active duty military personnel, the work environment has a more pronounced interaction with their total life space; hence, components of the work environment take on different meanings than for civilian workers. For those readers familiar with recent discussions as to whether the military is an occupation or an institution (Moskos, 1976), these findings support the Institutional Model where military life is a lifestyle rather than just a type of job.

The authors of the OAI (Tuttle et al., 1975) attempted to define, a priori, the factor space of the Air Force job attitude domain for two primary reasons: (a) to provide a theory-based outline for initial development of the OAI, and (b) to provide a basis for assessing the relationships between the military job attitude domain and its civilian counterpart. The factors were never intended to be used operationally. The authors believed that job satisfaction was multidimensional and that only specific detailed items would yield implications for job reengineering actions, suggest policy changes, or assess the effects of policy changes. An inspection of the factor space of the domain of Air Force job attitudes indicates that the 35 empirical factors account for approximately two-thirds of the variance in job attitudes—65 percent of the variance. Many of the items are thus accounting for substantial amounts of specific variance, and if only their common variance, factor scores, is considered, much of the information collected by the aggregate pool of items is lost. For these reasons, the factor structure of the attitude inventory may be of more concern to psychometricians rather than the operational managers. Appendix B contains the definitions of the 35 hypothesized factors by the item writers in developing the experimental OAI. Factor definitions derived from items with primary loadings on the 35 empirically derived factors (varimax rotated factors) are presented in \hat{c}_{15} endix C.

IV. IDENTIFICATION OF A MINIMUM SUBSET OF ITEMS MEASURING THE DOMAIN OF JOB ATTITUDE IN THE AIR FORCE

As stated previously, the operational use of factor scores for analyzing attitudes toward Air Force work environments does not always provide the level of specificity required. However, the 348 items in the experimental version of the OAI provided an instrument of excessive length for both administration and synthesis of results during analysis. The problem was then to reduce the OAI to the minimum subset of items which can capture the domain of variance measured by the full set.

The ideal item selection approach would have been to correlate the items with external criteria such as target consequences of job attitude and then select those items with the greatest correlation with the criteria. However, many of the consequences are unknown at this stage of the state-of-the-art in job satisfaction research (Gould, 1976), and those criteria that are known either do not have measures available

or they require lengthy longitudinal studies to collect, or else they are not yet fully defined or reliably measurable. Retention in service, productivity, motivation, accident rates, and absenteeism are but a few of the potential criteria. Even if items were selected using these specific external criteria, the resulting attitude instrument would be forever limited in use to the specific topics. The problem is then—how to identify a reduced set of OAI items and construct an OAI which can be used for multiple purposes.

In the absence of suitable external criteria, the standard approach for selecting a final set of variables is to use some type of total score (or factor scores) as the selection criteria. The procedure presents several disadvantages. Selecting variables which correlate with total or factor scores tends to produce a set of highly related or redundant variables with a corresponding loss of variables accounting for relatively unique components of score variance. Linear dependencies among scores, skewed variable distributions, and factor extraction inadequacies are only a few of the data and procedural discrepancies that can introduce criterion error when factor scores are used in variable selection exercises. Finally, the use of total and factor score criteria limits, unnecessarily, the future applications of many measurement instruments, particularly diagnostic instruments, because of the specificity of the selection criteria.

Faced with the item reduction problem and lack of a suitable existing item selection procedure, a general purpose computing algorithm was developed (Gould & Christal, 1976). The algorithm is titled Variable Selection for Multiple-Purpose Prediction Systems in the Absence of External Criteria (VARSEL). The system uses multiple linear regression techniques to start with a single item, or set of items, and iteratively select additional items which contribute the greatest amount of unique variance to the growing prediction system. At each iteraction, the selected set of items (S) is used to predict (R^2) the remaining $R - R^2$ values are then subtracted from their respective item reliabilities (R^2). The R^2 values represent the amount of reliable item variance unpredicted by the set of S items and thus the amount of unique reliable variance the item will contribute to the prediction system.

The 348-item OAI had been administered to a random sample of 3,100 airmen. Since previous studies indicated that most job dissatisfaction is among first-term airmen (Gould, 1976), responses of 1,340 first-term airmen were used in the item reduction exercise of the 330 non-supervisory items. The remaining sample of 1,760 career airmen was used in a separate item reduction exercise for the 18 supervisory items. The 330 items had been factor analyzed and 35 dimensions of job satisfaction identified. Therefore, before VARSEL processing began, approximately two items having high factor loadings, yet which subjectively measured different specific elements of the satisfaction dimension, were selected per factor for use as the starting set of selected items. This was done to ensure that the factor structure of the entire domain of 330 job attitude items was maintained during the selection process. Although the operational use of factor scores was not intended by the OAI developers, it seemed prudent to maintain the factor structure for possible use by future investigators. Because of the extreme length and varied content of the experimental OAI, it was not practical to obtain item reliabilities so a simple estimate procedure was used. One item, "The chance to work at your own pace," was placed in the OAI twice as item numbers 235 and 306. The item is the same format as the other 328 items and is considered to be a relatively simple and straightforward statement of an aspect of a job. Therefore, the correlation between items 235 and 306, r = .77, was accepted as the best available conservative estimate of the individual item reliabilities (r11). The $r_{11} - R^2$ or $.77 - R^2$ values were used to determine the potential unique reliable variance contribution of each selection candidate item. Because the same reliability was applied to all items, the r₁₁ value played a very small role in the actual selection process but did help to determine when to stop selecting items.

Table 5 presents an extract of the VARSEL iteration summary output obtained for the first five OAI item selection iterations. Seventy-one "user selected" variables were placed in the predictor set on the first iteration. Item 91 becomes the candidate variable for selection in iteration 2 because it has the largest unpredicted unique reliable variance, $r_{11} - R^2 = .575$, and will thus contribute the largest amount of domain variance prediction by being placed in the predictor system. There was no required number of items to select so VARSEL was allowed to continue until all items were selected. The iteration which would define the final set of OAI items was then selected. The unique reliable variance sum was used as one

Table 5. VARSEL Iteration Summary Print Extract for 330 OAI Items

Iteration	Number	1	2	3	4	5

148	Opportunity for personal growth	.022	.021	.021	.021	.021
235	Chance to work at your own pace	.211	.209	.208	.208	.208

indicator of when to stop selecting items. Iteration 119 was selected as the stopping point resulting in a final set of 190 items for the OAI. The sum of the unique reliable variance in the set of remaining 140 items was .36 so the average loss of unique reliable variance per item was .0026. The candidate item for selection in iteraction 120 had an $r_{11} - R^2 = .075$, so less than 8 percent of its "true" variance was not accounted for by the set of S variables. Most of the unselected items had less than 1 percent of their "true" variance unaccounted for by the S set of items; a highly successful result. The 190 selected items were refactored and the original 35 dimensions were obtained. The factor structure of the domain of attitude items had been maintained by the item selection process. However, the number of items per factor with moderate or high factor loadings decreased substantially, and several items selected did not load moderately on any factor. This would have been predicted since VARSEL is designed to minimize commonality among items selected.

The VARSEL analysis of the 18 supervisory items resulted in the selection of 10 items and thus a final set of 200 items for the OAI. Table 6 presents the 10 VARSEL iterations selecting the supervisory items. The unselected items were highly redundant with those selected since the average loss in unique reliable variance was again less than 1 percent per item. Appendix D contains the operational version of the OAI. The ordering of items in the OAI attempted to place dissimilar items adjacent to each other and have as many items as possible between the most similar items. Dispersion of similar items was attempted to reduce response set tendencies present when lengthy inventories are being completed. However, the 10 supervisory items were placed last in the inventory to permit nonsupervisory personnel to skip items which did not apply to their jobs. Following the final 200 items in Appendix D is a listing of 35 attitude dimensions with an accompanying importance rating scale. The 35 dimensions are not intended for use by program managers but are included in the OAI to facilitate additional validation and research efforts.

Asterisks indicate the item has been selected and is in the set of predictor items.

V. DEVELOPMENT OF A BACKGROUND INFORMATION SECTION FOR INCLUSION IN THE OCCUPATIONAL ATTITUDE INVENTORY

The authors of the experimental version of the OAI (Tuttle et al., 1975) conducted an extensive review of the job attitude literature to identify individuals' characteristics which were reportedly related to job attitudes for inclusion in the Background Information Section of the OAI. Fifty-five life history information and 11 current work status items were selected as shown in Appendix E. Four job attitude questions were also included in the Background Information Section to serve as criteria for a future background item reduction exercise. The items selected included personal characteristics such as age, race, marital status, and education level; life history items such as early work history, characteristics of place of residence during formative years, socioeconomic status of parents, and characteristics of family and parents; past and current interests and activities such as sports and literary activities; personal aspirations and expectations; and perceived attitudes by family members toward a military career.

Stepwise, multiple-linear regression techniques were used to eliminate background items which did not have unique relationships to any of the attitude criteria items as shown on the second page of Appendix E. Several items such as race, age when obtained first regular paying job, mobility, education, and socioeconomic status of parents, individual's contribution to parent's income, birth order, and draft vulnerability of the individual when he entered service did not contribute to job attitude prediction when such factors as age, marital status, academic standing, aptitude, and selected leisure activities were held constant.

A separate analysis of the relationship between job attitudes and sports and leisure activities was conducted and reported by Burtch and Hazel (1975). Using criteria of career intent, job interest, perceived utilization, and a general job satisfaction measure, tennis, fishing, and listening to hard rock or country/western music were the few activities that significantly correlated with job attitudes. These few relationships were found out of the 18 past and current activities considered: frequency of participation in football, basketball, wrestling, boxing, baseball/softball, track, golf, tennis, hunting, fishing, swimming, camping, hiking, jogging/running; time spent reading at home; hobby activities; type music enjoyed; and average hours of exercise. Satisfied personnel tend to have a greater preference for western music and spend more time fishing than dissatisfied personnel who like rock music and play more tennis. Some activity preferences differ between first-term and career airmen but, except for those just cited, generally do not significantly relate to job attitudes when a measure of job tenure (i.e., time in service) is held constant. Few sports and leisure activity differences exist between satisfied and dissatisfied airmen when job tenure is taken into account.

Items uniquely related to job attitudes are listed in Table 7. The vast majority of items failed to significantly relate to the job attitude criteria when measures of age, education, aptitude, and job tenure were held constant. The significant items were included in the Background Information Section of the revised OAI, along with additional items believed to be important to researchers when investigating the correlates of job attitudes in Air Force jobs. The additional items were selected to amplify original OAI responses which were ambiguous, particularly to those interested in defining specific job problem areas and suggesting remedial actions. For example, items soliciting respondents' satisfaction with shift work, PCS opportunities, overseas assignments and required retraining did not permit the examiner to identify whether negative responses meant the respondent had too much or not enough of the indicated activities. The final items included in the OAI are shown in Appendix D.

VI. DEVELOPMENT OF THE FINAL RATING SCALE

The experimental version of the OAI considered a number of specific issues in developing the satisfaction rating scale to be used (Tuttle et al., 1975). The basic issues concerned: (a) dimension to be measured, (b) nature of the dimension—bipolar or unipolar, (c) benchmarks to be used, if any, (d) consideration of the neutral point, and (e) number of scale intervals.

Table 7. Background Information Items Uniquely Related to a Variety of Job Attitude Criteria as Identified by Multiple Regression Techniques^a

Personal attributes:

Age

Average time spent reading technical material Educational aspirations
Educational level
High school class standing
Rated driving ability
Type music enjoyed most

Job History attributes:

Grade level Number supervised directly Total months active Federal military service

Family attributes:

Marital status
Number of brothers and sisters
Number of dependents
Parents' attitude toward military career
Spouse's attitude toward military career

Other:

Distance from current base to home of record Population of community near base Size of community raised in

Past approaches to the dimensions to be measured had (a) requested the degree of agreement and disagreement with various attitude statements, (b) measured amounts of reward desired and amounts received to derive a discrepancy score, and (c) asked for direct statements of levels of satisfaction. The last approach was selected as the most parsimonious approach, the one most consistent with the authors' definition of job satisfaction, and the approach that had been the most fruitful method in past research. An extensive literature review (Tuttle & Hazel, 1974) had concluded that satisfaction and dissatisfaction represented opposite ends of a single bipolar job attitude continuum rather than separate dimensions as proposed by Herzberg (1966) and his associates (Herzberg, Mausner, & Snyderman, 1959). This conclusion also meant that the rating scale would at least have benchmarks ranging from dissatisfaction to satisfaction.

Concerning the scale points, Kaplan (1972) discussed the interpretation of the neutral point on a bipolar scale which ranges from a negative scale value to a positive value. A person can respond with "0" either because he is truly ambivalent and cannot decide between the two aspects of the dimension being measured or because he is indifferent concerning the attitude being measured. Therefore, a neutral point on such a scale is ambiguous and can only be interpreted in light of other information. One approach to the problem is to eliminate the neutral point by having an even number of steps in the scale. This approach assumes that individuals can be forced out of the neutral point in a reliable way (Nunnally, 1967). In addition, as Nunnally (1967) points out, elimination of the neutral point helps control for response style in that there may be individual differences in the tendency to take the midpoint of a scale, and this tendency might not relate to the attitude being measured.

On the basis of the evidence from Kaplan (1972) concerning the problem of interpretability, and Nunnally (1967) indicating that individuals who mark the neutral point can be reliably differentiated on the attitude in question, an even number of scale intervals was chosen, thereby omitting the zero, or neutral, point. For determining the number of scale steps, a general guideline is that it is better to have more rather than fewer (Nunnally, 1967). Empirical evidence indicates that reliability increases as a function of the number of steps. This function increases rapidly up to about seven steps, more slowly to 11 steps, and then very gradually to about 20 steps. Based on this phenomenon and the ability to write distinguishable anchor points, the decision was made to construct a scale with eight intervals as shown in Table 2. The scale constructed was anchored at each step by numbers ranging from 1 to 8 and by verbal definitions ranging from Extremely Dissatisfied to Extremely Satisfied. For a full discussion of the scale development and the relevant issues concerning the 8-point scale, see Tuttle et al. (1975).

^aBackground items shown in Appendix E and not listed above were not significantly related to job attitude.

The results obtained from administration of the 8-point scale to the 3,100-case sample suggested that forcing airmen to choose a negative or positive response provided a less than desirable distribution of item responses. Rather than approximating a normal pattern of responses, the distributions tended to be relatively flat (platykurtic) and were in fact rectangular in appearance with a slight positive skewness. Assuming that attitudes toward Air Force jobs are normally distributed about mean values, the 8-point scale forced the responses into a non-normal and unrepresentative array. The obtained rectangular distributions are not desired since they tend to maximize the measurement errors in the region of primary concern (the polar ends of the distribution) when distinguishing between satisfied and dissatisfied personnel. From a research utility standpoint, such distribution deviations from normality also deflate correlational values and hence the probability of investigators identifying significant relationships when using the attitude items as predictors of criteria.

For these reasons, which are primarily empirical rather than theoretical concerns, a new scale was developed for future use with the OAI. The scale employs 9 points with a central, Neither Satisfied nor Dissatisfied, point as shown in Table 2. Subsequent administration of the revised OAI to a random sample of 7,567 airmen yielded distributions which more closely approximated the normal curve. The actual shapes of the distributions were somewhat peaked (leptokurtic) and again slightly positively skewed. From a psychometric standpoint, the 9-point scale distributions are viewed as more favorable to the utility of the OAI as a research instrument. Subsequent analyses of the OAI should address the issues of mental set or response pattern problems and the difficulty in interpreting the meaning of neutral responses; these are problems largely avoided by the original 8-point scale.

VII. REVALIDATION OF THE OAI JOB ATTITUDE FACTORS

Several issues mandated revalidation of the factor structure of the OAI.

- 1. The initial factor analysis of 330 items showed considerable variance between empirically derived facets of job satisfaction for the Air Force work environment and facets identified in the civilian work environment and subsequently hypothesized to exist in the military environment.
- 2. The substantial deviation from the civilian findings and lack of similar studies in the military setting suggest a chance bias may have existed in the sample—the analyses used a small sample of 1,340 first-term airmen and an instrument whose length (348 items) was excessive.
- 3. Revalidation was also required because the inventory was reduced to 200 items by a process which sought to primarily select unique items rather than replicate factors. The possibility existed that the selection technique may have violated the factor space of the original 348-item instrument.

The item reduction exercise had identified a subset of 190 nonsupervisory and 10 supervisory items for use in the operational version of the OAI. The 200-item inventory was mailed to a random sample of 7,000 first-term and 3,000 career airmen. The complete inventory is included in Appendix D. Usable returns for 5,089 first-term and 2,478 career airmen were received. The entire 7,567 case sample was used to analyze the 190 nonsupervisory items. Thirty-five varimax rotated factors were again obtained. With minor exceptions, primarily in specific item loadings, the same factor structure was identified.

As summarized in Table 8, 24 extracted factors were virtually identical and six new factors were identified. Five factors were not repeated, and loadings on five others changed sufficiently to warrant a minor change in the name. The renamed factors posed few surprises and primarily were combinations or slight emphasis changes of the non-replicated factors. For example, Information on Policies and Procedures and Unit Safety and GMT Programs became Safety, GMT and Promotion Policies and Procedures; Control Over Others became Control Over Work and Personnel; and Service to Others became Welfare of Members. Three factors, Continuing Job Training (Job Change), Job Design, and Variety and Utilization replicated original hypothesized dimensions which were not found in the factor analysis of 330 original OAI items. The 35-facet factor structure accounted for 64 percent of the domain of variance measured by the 190

Table 8. Comparison of Empirically Derived Job Attitude Factors for Original and Revised OAI^a

Area cost of living Assignment locality Base housing and eating facilities Benefits provided by base facilities Continuing job training Control over work and personnel Co-workers **Economic security** Family attitude toward job Independence Job design Knowledge of results Leave and time-off policies Opportunities for social contact Personal growth and development opportunities Physical activity of job Physical demands of the work environment Physical characteristics of work environment Promotion opportunity Recognition Safety, GMT, and promotion policies and procedures Social contact (nonpeer) Status in civilian community Sufficiency of training Supervisor's competence TDY costs and conditions Temperatures in the work environment Tools, equipment, and supplies Travel requirements and opportunities Value of experience Variety and utilization Welfare of members Work climate Work itself Work schedule

Minor differences in original and validation sample factor structures are believed to be due largely to sample differences. Differences between original empirical and validation factor definitions are minor and reflect the subjectivity of the factor analytic process. Original hypothesized and final validation factor structure differences were virtually the same as were originally found between hypothesized and empirical factors obtained from the development sample. Most specific facets of the job itself found in civilian work environments compose a single facet, the Work Itself, in the military work environment. Similarly, various aspects of supervisors' attributes differentiated in the civilian environment are combined into a single Supervisor's Competence facet. While civilian research tends to report a general Pay and Benefit facet, the

attitudes of military members are compartmentalized into many specific aspects of their overall life environment. From both the developmental and validation sample results, one clear finding is that the civilian sector and military personnel have different perspectives of their work environments. Job attitude related research conducted in one environment must be validated in the other before attempting to apply or make generalizations from the results.

APPENDIX A: OCCUPATION ATTITUDE INVENTORY ITEM POOL OF 348 ITEMS

- 1. The chance to feel you are accomplishing something.
- 2. The Air Force's efforts to remove irritants and sources of dissatisfaction.
- 3. The geographical area to which you are assigned.
- 4. The moral standards of your co-workers.
- 5. The contribution your work makes to the national defense.
- 6. Enjoyment you get from doing your job.
- 7. The contribution your job makes to your vocational development.
- 8. The opportunity to choose your close associates on the job.
- 9. Personal conveniences provided in the work area.
- 10. The chance to get ahead on the job.
- 11. The amount of social contact required by the job.
- 12. The attention given to safety in your work area.
- 13. The respect that results from your rank and job.
- 14. The extent to which your supervisor brings out the best in his men.
- 15. Your supervisor's knowledge of the way your job is done.
- 16. The need for frequent retraining within your specialty.
- 17. The opportunity to develop your skills for a lifetime occupation.
- 18. Chance to vary your work schedule when required to conduct personal business.
- 19. The chance to complete work that you start.
- 20. The adequacy of the information provided you on the Air Force promotion system.
- 21. The attitudes of civilians around your base toward the Air Force.
- 22. The opportunity to make and implement new suggestions.
- 23. The chance to plan your own work.
- 24. The chance to know for yourself when you do a good job.
- 25. The efficiency with which your work time is allocated.
- 26. The opportunity to meet new people.
- 27. The noise level of your work environment.
- 28. Recognition for the quality of work that you do.
- 29. The chance to be responsible for your own work.
- 30. The chance to improve the welfare of others.
- 31. Your training in where and how to get needed technical information.
- 32. Your personal relationship with your supervisor.
- The accuracy of the information you receive about your performance.
- 34. The priority given to your requests for supplies.
- 35. The demand for your job obtained skills in the civilian job market.
- 36. The regularity of your work schedule.
- 37. The pace of your work.
- 38. The amount of "red tape" connected with your work.
- 39. The chance for meaningful social contact in your work.
- 40. The chance to try different methods on your own.
- 41. Your level of interest in this job compared to others you have held.
- 42. The ability of your job to provide new challenges.

- 43. The chance to tell others what to do.
- 44. The amount of money you can make in the Air Force.
- 45. The opportunity for promotions in your career field.
- 46. The amount of time you spend in job-required communication.
- 47. The control your job gives you over material.
- 48. The opportunity to be of service to others.
- 49. The availability of useful self-help training materials.
- 50. The extent to which your supervisor keeps you informed.
- 51. The rate of change in the content of your work.
- 52. The way your job uses your abilities.
- 53. Sometimes having new and different situations to handle.
- 54. Opportunity to point to your accomplishments.
- 55. The way your unit handles required General Military Training and Physical Fitness testing.
- 56. The educational opportunities provided by the surrounding community.
- 57. The amount of pride your co-workers have in their work.
- 58. The chance to make decisions for yourself.
- 59. The opportunity to see the results of your work.
- 60. The way the tasks in your job are organized.
- 61. The opportunity to have some control over the time spent with others.
- 62. Amount of work space available.
- 63. The recognition you receive from your family for the work you do.
- 64. The chance to feel responsible for a total unit of work.
- 65. The security of your job.
- 66. The opportunity to meet and work with important people.
- 67. The respect your supervisor shows for you as a person.
- 68. The amount of time your supervisor takes to make a decision.
- 69. The promptness with which equipment malfunctions are handled.
- 70. The amount of your training that can be applied to a civilian occupation.
- 71. Your work schedule compared to the schedule of a typical civilian job.
- 72. Chance to engage in physical activity.
- 73. Travel (PCS) opportunities for personnel in your specialty.
- 74. The BX and Commissary facilities at your base.
- 75. The amount of creativity required by your job.
- 76. The amount of freedom you have on the job.
- 77. Chance to do a "whole piece of work".
- 78. The difficulty level of your job.
- 79. Your pay compared to what you could make on the outside.
- 80. The amount of exposure to unpleasant chemicals or gases.
- 81. The recognition your unit gives for good performance.
- 82. The chance to take charge of a work goal.
- 83. The chance to perform tasks which benefit peoples lives.
- 84. Your chance of getting additional training compared to others in your field.
- 85. The fairness with which your supervisor assigns work.
- 86. Opportunity to find out from your supervisor whether you are doing poorly or well.
- 87. The ability demands of your job.
- 88. Chance to work in different types of situations.
- 89. The number of times your work schedule has interfered with personal plans.
- 90. Your unit's policy for assigning additional duties.
- 91. The cost of living in the area to which you are assigned.
- 92. The friendliness of your co-workers.
- 93. Opportunity to make a clear contribution to the mission of your unit.
- 94. Amount of interesting work you get to do.

- 95. The challenge provided by your job.
- 96. The chance to do work that does not bother your conscience.
- 97. The protection provided by the Air Force Life Insurance program.
- 98. Your chance for promotion compared to others doing similar work.
- 99. The closeness with which you have to work with others.
- 100. Your physical safety on the job.
- 101. Your social position in the Air Force as a result of your job.
- 102. The instructional methods used in your training.
- 103. The way your supervisor handles technical problems.
- 104. The pace of new developments in your field.
- 105. Chance to take advantage of your abilities.
- 106. Opportunity to get away from the routine and do something new.
- 107. The opportunity to have pride in the work that you do.
- 108. The way your preferences are considered by your unit.
- 109. The similarity between your assignment and your assignment preference.
- 110. Your amount of effort compared to the effort of your co-workers.
- 111. The importance attached to your job by your co-workers.
- 112. Chance to do the type of work you have always wanted to do.
- 113. The chance to gain new knowledges and skills.
- 114. The chance to work with different people if you want to.
- 115. Adequacy of lighting in the immediate work area.
- 116. The opportunity to have the results of your work noticed by others.
- 117. The amount of cooperation required.
- 118. The feeling of economic security you have in the Air Force.
- 119. The status you have in the civilian community because of your job.
- 120. The way your supervisor handles personal problems.
- 121. The ability of your supervisor to make decisions.
- 122. The availability of tools and equipment needed to do the job.
- 123. The future potential for civilian work of the same type you are now doing.
- 124. The flexibility of your work schedule.
- 125. Opportunity to always have something to do.
- 126. The frequency of reassignment for airmen in your specialty.
- 127. The facilities provided by the base.
- 128. The chance to "think up" new ways of doing things.
- 129. The chance to have a say in what you do.
- 130. Chance to do a job from start to finish.
- 131. The physical demands of your job.
- 132. Your fringe benefits compared to fringe benefits offered by a civilian job.
- 133. The cleanliness of your work environment.
- 134. The chance to be recognized for outstanding performance.
- 135. The opportunity to accept responsibility for getting a job done.
- 136 The chance to help people.
- 137. The opportunity to receive additional training when necessary to meet new job dema
- 138. The way your supervisor handles disciplinary problems.
- 139. Your supervisor's fairness in rating subordinates.
- 140. The opportunity to use up-to-date equipment.
- 141. The chance to receive civilian educational credit for your military job training.
- 142. The chance to schedule your time-off.
- 143. The amount of work you have to do.
- 144. The frequency of overseas or remote assignments for your specialty.
- 145. The "know-how" of the people you work with.
- 146. The benefit derived by the Air Force from you work.

- 147. The interest you have in going to work each day.
- 148. The opportunity for personal growth and development in your job.
- 149. The opportunity to perform activities which are morally acceptable.
- 150. The advantages provided by the commissary and BX.
- 151. The chance to be promoted on the basis of ability.
- 152. The amount of communication required.
- 153. The level of danger in your job.
- 154. The prestige that goes with your position.
- 155. The competence of the instructors you have encountered.
- 156. The amount of respect your supervisor shows for your ability.
- 157. The amount of work time spent learning about new procedures or equipment.
- 158. The chance to utilize your civilian education and training.
- 159. The opportunity to "wear several hats".
- 160. The feeling that your efforts lead to results.
- 161. The adequacy of information you receive about unit policies.
- 162. The distance to your home of record.
- 163. The chance to try new ideas.
- 164. The chance to participate in setting your work goals.
- 165. The chance to see how your effort pays off.
- 166. The time allotted for different tasks.
- 167. The chance to work by yourself whenever you feel like it.
- 168. Normal temperature of your work environment.
- 169. The recognition co-workers give to your work.
- 170. The chance to be held accountable for your work.
- 171. Your chances of remaining on active duty until retirement if you want to.
- 172. The status given a military man by the civilian community.
- 173. The leadership qualities of your supervisor.
- 174. The information you get from your supervisor about your work performance.
- 175. The amount of time you spend waiting for needed tools, supplies or equipment.
- 176. The future value of your skill in the civilian labor market.
- 177. The time of day that you go to work.
- 178. The extent to which you can stay mentally active on the job.
- 179. The amount of leave time you are allowed.
- 180. The on-base housing.
- 181. The opportunity to use your imagination to solve problems.
- 182. The opportunity to decide for yourself how to accomplish your job.
- 183. The chance to broaden the scope of your activities.
- 184. Amount of effort required to do your work.
- 185. The opportunity for you or your family to travel at military rates.
- 186. Convenience of the location of the work area to mess facilities and living quarters.
- 187. The amount of required coordination with others.
- 188. The extent to which you take the blame for others mistakes.
- 189. The importance of your job performance to the welfare of others.
- 190. The chance to be trained in the use of modern equipment.
- 191. The chance to make your grievances known.
- 192. Your supervisor's skill in writing performance evaluations.
- 193. Chance to do the kind of work you do best.
- 194. The amount of variety in your work.
- 195. The amount of non-scheduled work you have to do.
- 196. The leave policy of your unit.
- 197. The size of your base.
- 198. The opportunity to work with people who know their jobs.

199. The importance of your work.

200. Opportunity to develop new interests.

201. The chance to realize your vocational potential.

202. The chance to do things which do not violate your sense of right and wrong.

203. The standard of living which your income provides.

204. The relationship between your job performance and chances for promotion.

205. The amount of dependence on others to get the job done.

206. The hazards involved in doing your job.

The pride your family has in your work.The similarity between your training and the requirements of the job.

209. Your supervisor's knowledge of your job.

210. The feeling that changes made in your job are usually improvements.

211. Chance to use your military training.

212. The chance to start something else if a task gets monotonous.

213. The feeling of accomplishment you get from your work.

214. The availability of information on Air Force policies and practices.

215. The size of the surrounding community.

216. The chance to work with other people.217. The importance you feel while doing your job

217. The importance you feel while doing your job.218. Amount of pleasure you get from doing your job.

219. The time pressures of your job.

220. The opportunity to associate with people you like.

221. The surroundings in which your job is performed.

222. The chance to receive community recognition for your work.

223. The level of responsibility that goes with your job.

224. The way the Air Force provides for its people.

225. Your prestige in the military community resulting from the type of work you do.

226. The way your supervisor handles his men.

227. The way your supervisor trains his men.

228. The condition of the tools or equipment you use.

229. The chance to acquire valuable skills.

230. The number of hours you work per week.

231. Opportunity to stay busy.

232. The assignment possibilities associated with your career field.

233. The weather at your base.

234. The opportunity for originality in your work.

235. The chance to work at your own pace.

236. Chance to do work with identifiable results.

237. The additional duties associated with your job.

238. The quality of medical care provided by the Air Force.

239. The physical appearance of the work area.

240. The praise you get from your supervisor.

241. The chance to handle a position of trust.

242. The chance to feel that you perform a service to others.

243. The training you have received to perform your current job.

244. The likelihood that your supervisor will back you up.

245. The promptness with which you find out how you are doing.

246. The availability of necessary materiel or supplies.

247. Chance to regularly perform a variety of tasks.

248. The way your working hours are scheduled.

249. The frequency of slack periods on the job.

250. Travel (TDY) opportunities for personnel in your specialty.

- 251. The "spirit of teamwork" which exists between your co-workers.
- 252. The importance of your work for the accomplishment of you unit's mission.
- 253. The similarity between your interests and work activities.
- 254. The chance to "dig deeper" into work activities which interest you.
- 255. The chance to avoid situations which violate your religious beliefs.
- 256. The retirement income you would receive from an Air Force career.
- 257. The Weighted Airman Promotion System (WAPS).
- 258. The amount of teamwork required.
- 259. The chances of being injured or physically harmed on your job.
- 260. The prestige your family receives as a result of your job.
- 261. The adequacy of your training for meeting emergency situations.
- 262. The technical competence of your supervisor.
- The amount of effort required to keep up with developments in your field. 263.
- 264. The similarity between the skills you have learned and the job you are doing.
- 265. Chance to use different types of equipment.
- 266. The progress you are making toward work objectives.
- The opportunity provided by the Air Force for self-improvement education. 267.
- 268. The cultural opportunities provided by the surrounding community.
- 269. The chance to use your initiative.
- 270. The amount of freedom you have to decide work methods and procedures.
- 271. Chance to identify clearly the results of the tasks you perform.
- 272. The amount of work required by your job compared to other Air Force jobs.
- The chance to socialize with people whose work is different from yours. 273.
- 274. The working conditions associated with your job.
- 275. The opportunity for recognition provided by your job.
- 276. The amount of responsibility for equipment or supplies.
- 277. The chance to do work that is beneficial to mankind.
- 278. The feelings you get from wearing the Air Force uniform.
- 279. The willingness of your supervisor to listen to his employees.
- 280. The chance to know where you stand with your supervisor.
- 281. The extent to which tools and equipment are shared by co-workers.
- 282. The chance to prepare for your eventual return to civilian life.
- 283. Effect of your work schedule on your personal life.
- 284. The opportunity to move around on your job.
- 285. The amount of paperwork required to do your job.
- 286. The extent to which those you work with "share the load".
- 287. The way new ideas are accepted.
- 288. The chance to pursue interests you have had for a long time.
- 289.
- The chance to "grow" in your job.
 The amount of "dirty-hand" work you do. 290.
- 291. The benefits provided by the Air Force.
- 292. Your promotion opportunities in the Air Force compared to those in a civilian occupation.
- 293. The amount of required telephone communication.
- 294. The control your job gives you over people.
- 295. The effects of your work on other people.
- 296. The scope and type of on-the-job training you are receiving.
- The availability of your supervisor when you have a problem. 297.
- 298. The way your supervisor evaluates your work.
- 299. The similarity between your abilities and the requirements of the job.
- 300. Opportunity to vary your work methods or procedures.
- 301. The effect of your work schedule on your favorite recreational activities.
- 302. The consideration given you as a person by the Air Force.

- 303. The recreational opportunities provided by the surrounding community.
- 304. The amount of competition among your co-workers.
- 305. The value of your work for the Air Force.
- 306. The chance to work at your own pace.
- 307. The cost of TDY versus the payment received.
- 308. The opportunity to take on new responsibilities.
- 309. The morality of your work.
- 310. Amount of time you must work in extreme temperatures.
- 311. Your knowledge of the operation of the Air Force promotion system.
- 312. The social obligations related to the job you hold.
- 313. The safety program in your unit.
- 314. The status your job gives compared to the status you would expect as a civilian.
- 315. Your organization's OJT training program.
- 316. The concern your supervisor shows for the welfare of his subordinates.
- 317. The technical "know-how" of your supervisor.
- 318. The amount of change in your job compared to other jobs you have held.
- 319. The extent to which your military pay covers your living expenses.
- 320. The living and working conditions faced on TDY.
- 321. The kind of job supervision usually received.
- 322. The amount of authorized time off for meals.
- 323. On-base and off-base transportation facilities.
- 324. The opportunity to get enough sleep during an average 24 hour day.
- 325. The amount of on the job supervision you receive.
- 326. The quality of base quarters, barracks, or civilian housing in which you live.
- 327. The quality of food and availability of eating facilities at your base or location.
- 328. The opportunity for an off duty job.
- 329. Your work schedule.
- 330. The ability of your supervisor to communicate instructions.

For Supervisors Only

- 331. The power you have over others.
- 332. The number of people that you supervise.
- 333. The opportunity to supervise the work of others.
- 334. The chance to organize the efforts of others to accomplish a mission.
- 335. The chance to show you can supervise the work of others.
- 336. The authority you have over others.
- 337. The chance to have people working under your authority.
- 338. The extent which your job requires you to enforce rules and regulations.
- 339. The way others respect your authority.
- 340. The opportunity to evaluate the work of others.
- 341. The chance to give orders.
- 342. The chance to be responsible for work done by others.
- 343. The opportunity to direct the work of others.
- 344. The chance to take control and run things.
- 345. The chance to have other people come to you for information and advice.
- 346. The opportunity to influence how others do their jobs.
- 347. The amount of paperwork associated with your role as supervisor.
- 348. The amount of counseling time required to supervise people.

APPENDIX B: REVISED LIST OF 35 ATTITUDE CATEGORIES

- Achievement Feelings of accomplishment derived from your job performance. The pride and
 pleasure associated with a job well done.
- Activity The opportunity to have sufficient work to keep you busy during required duty hours.
 Being able to avoid slack periods and periods of involuntary inactivity. (Includes physical and/or mental work activity)
- 3. Air Force and Unit Policies and Practices The effects of Air Force, Major Command, or local unit policies on you and your motivation to perform or remain in your position.
- 4. Assignment Locality The desirability of your current assignment locality. Includes characteristics of the base as well as characteristics of the surrounding community.
- 5. Authority The amount of power you have to influence or control the activities of others. This power may be due to your position in the chain of command, power inherent in the performance of your duties (i.e., security policeman), or power due to special knowledge or expertise.
- 6. Co-workers The compatibility of your co-workers. Includes characteristics of your co-workers such as how friendly, cooperative, competent, and sociable they are.
- 7. Creativity The chance to apply your initiative, ingenuity, and creative talent to the work situation to produce new or original products, ideas, or solutions to problems.
- Importance The feeling that your work is valuable to the Air Force. Work could be perceived as
 important if the failure to perform satisfactorily could, in some way, affect the accomplishment of
 an Air Force mission.
- Independence The chance to plan and carry out your own work activities rather than be directed
 by others. The chance to work with minimal supervision, and to exercise considerable autonomy in
 planning and implementing your work.
- 10. Interest The chance to perform work activities which are compatible with your preferences or interests. The chance to do work which you find pleasurable for its own sake.
- 11. Knowledge of Results The chance to see or determine the results of your work. Having the opportunity to determine the contribution you make to mission accomplishment.
- 12. Personal Growth and Development The opportunity for self-fulfillment in the job. The chance to "grow" in the job, by developing new interests and skills.
- 13. Job Design The manner in which your tasks fit together in your job. Includes the efficiency of task organization, whether tasks are performed in a logical sequence, time pressures of the job, number of tasks performed, etc.
- 14. Optional Social Contact The opportunity to choose the co-workers with whom you have close contact, either on the job or off the job. The amount of control you have over the time, place, and frequency of social interaction.
- 15. Pay and Benefits The level of pay and the desirability of Air Force benefits. Included are incentive pay, retirement, medical care, BX, commissary privileges, etc.
- 16. Physical Work Environment Characteristics of your immediate work area. Included are such characteristics as lighting, noise level, cleanliness, attractiveness, amount of work space, temperature, humidity, location, etc.
- Promotion Opportunity The operation of the Air Force promotion system. Includes your opportunity for promotion, the criteria for promotion, feelings that promotions are rewards for good work, etc.

- 18. Recognition The opportunity to obtain clear recognition or appreciation for your work activities. This acknowledgement may come from sources inside the Air Force (i.e., supervisor, unit commander, etc.) or outside the Air Force (community, family, etc.). Included is recognition based on the work performed rather than the position occupied.
- Required Social Contact The amount of contact with others required to perform your work activities or to fulfill the social obligations of your position. Included is face to face contact as well as contact through written and oral communication.
- Responsibility The amount of responsibility you have for your actions, decisions, and their consequences. Includes responsibility for the welfare of people, for accomplishment of a mission, for tools or equipment and other property, or for financial assets.
- 21. Physical Safety The protection you have against bodily injury or harm connected with your job. The threat of injury may be due to the type of equipment used, weapon system worked on, handling or dealing with explosives, as well as danger from combat activity.
- 22. Economic Security The feeling that your Air Force job is secure and will continue even if the general economic situation becomes poor. The chance to feel that your basic security needs, (food, clothing, shelter, medical care, etc.) will be met.
- Service to Others The opportunity to engage in work activities which directly or indirectly improve the well being of others. The opportunity to feel that the work you do is of benefit to others.
- 24. Social Status The social standing or prestige which results from your position or job. This refers to social status both within and outside the Air Force.
- Sufficiency of Training The opportunity to receive adequate training to do your assigned job.
 Also includes the feeling that you will be able to obtain additional training as needed to remain current on the job.
- Supervision Received Human Relations The ability of your boss or supervisor to handle human
 or social situations on the job. The amount of concern displayed by your supervisor for the welfare of his men.
- Supervision Received Technical The competence displayed by your supervisor in dealing with technical problems encountered in the job. Your supervisor's ability to develop technical skills in his men.
- Performance Evaluation The frequency, timeliness, accuracy and fairness of the performance evaluation received from your supervisor. The extent to which your supervisor lets you know where you stand.
- 29. Job Change The frequency with which the content of your job changes as a result of technological developments. The rate or pace of changes in tasks performed, tools used, procedures used, and their impact on the worker. Amount of time and effort required to remain current.
- Tools, Equipment, and Supplies The availability, when needed, of adequate tools, equipment, and supplies. The condition of tools and equipment and the ease with which malfunctions are handled.
- 31. Utilization The extent to which your work makes use of your abilities, training, and experience.
- 32. Value of Experience The opportunity to obtain Air Force skills which will be of future value to the Air Force and the civilian labor market. Being able to feel that the skills you obtain will not become obsolete.
- 33. Variety The opportunity to have variety in the content of your work. Variety may result from working with unique problems, working with different people, working in a new location, or from having a number of different tasks to perform.

- 34. Work Schedule The hours that you are required to work. Includes the way your work is scheduled as well as the impact of your work schedule on your private life.
- 35. Supervisory Duties Defined in terms of the specific items involved. See heading and items 191-200 in Appendix D.

APPENDIX C: FACTOR DEFINITIONS DERIVED FROM 330 ITEMS WITH PRIMARY LOADINGS ON 35 EMPIRICALLY DERIVED VARIMAX ROTATED FACTORS²

Additional Duties - Additional duties, nonscheduled work, red tape and irritants associated with your job.

Assignment Locality - Characteristics of the assignment location (includes probable future assignments).

Base Housing & Eating Facilities - Quality of base housing and eating facilities.

Benefits Provided by Base Facilities - Benefits provided by base facilities (BX, commissary, medical care).

Control Over Others - Chance to control or direct others (nonsupervisory direction).

Co-workers - Co-worker characteristics and relationships (teamwork, competitiveness, technical compentence).

Economic Security - Economic security provided by the military.

Family Attitude Toward Job - Family attitude toward your job.

Independence - Independence in work procedures (personal responsibility for determining own work procedures).

Information on Policies and Procedures - Availability of information on policies and procedures.

Job Security - Job security through certainty of being retained in the military.

Knowledge of Results - Amount of autonomy and closure on job tasks to permit self assessment of own work methods.

Leave & Time Off Policies - Leave and time off policies.

Morality of Work - Moral acceptability of job.

Opportunities for Social Contact - Opportunities for social contact.

Opportunity to Stay Busy - Frequency of slack periods on the job.

Personal Growth & Development - Opportunities for self-improvement (off-duty educational, cultural, and work opportunities).

Physical Demands of Job - Physical activity and demands of job.

Physical Safety - Job hazards.

Physical Work Environment - Characteristics of work space (size and appearance).

Promotion Opportunity - Promotion chances based on ability.

Recognition - Recognition unit gives for good performance of job tasks and additional duties.

Required Coordination - Required verbal and written coordination (paperwork and telephone communication) in your job.

Service to Others - Chance to benefit or improve welfare of others through performance of job.

Social Contact (nonpeer) - Close association with people (other than co-workers).

Status in Civilian Community - Status in civilian community resulting from military job.

Sufficiency of Training - Job associated training (OJT and technical instructors' competence; relevance and extent of training).

Supervisor's Competence - Managerial and technical competence of supervisors.

TDY Costs and Conditions - TDY costs and conditions (living and working conditions and adequacy of reimbursements for expenses).

Tools, Equipment, & Supplies - Availability and condition of tools, supplies, and equipment.

Travel Requirements & Opportunities - Travel (PCS & TDY requirements and opportunities).

Unit Safety & GMT Programs - Safety programs and GMT within your unit.

Value of Experience - Transferability of Air Force job obtained skills to civilian job market.

Work Itself - Work itself (challenge, interest, importance, variety, feelings of accomplishment).

Work Schedule - Work schedule (number of hours and time of day worked; flexibility of schedule).

^aSupervisory duty items not included in factor analysis because of nonsupervisory nature of the sample.

APPENDIX D: UNITED STATES AIR FORCE OCCUPATIONAL ATTITUDE INVENTORY

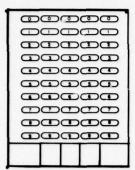

UNITED STATES AIR FORCE

OCCUPATIONAL ATTITUDE INVENTORY

Return completed to CBPO within 10 working days per AFM 35-2

OCCUPATIONAL AND MANPOWER RESEARCH DIVISION USAF HUMAN RESOURCES LABORATORY LACKLAND AFB TEXAS 78236 AUTOVON 473-3895 USAF SCN 75-158 15 May 1975

INTRODUCTION

How do you feel about your Job?

The purpose of this inventory is to investigate thoroughly the attitudes of Air Force personnel about a wide range of factors. Most of these factors are jobrelated, however, some are related to Air Force life in general. Once the attitudes of a large number of individuals are obtained, these will be analyzed to determine: (1) causes of dissatisfaction; and (2) what can be done to increase job satisfaction.

The inventory is composed of three sections. Section I - General Information requests information about your background, interests, and family to assist in interpretation of responses. Section II - Occupational Attitude Information includes statements concerning various aspects of your job and Air Force life.

Section III - Importance of Job Aspects to Career Decisions asks you to indicate the importance of aspects of your job to career decisions.

It is extremely important that the true attitudes of individuals be obtained. The information you are asked to provide will be used for research purposes only. Responses will not be identified with you by name, and will be combined with responses from others in agregate form for use by Air Force managers.

When you have completed the survey, place the booklet in the enclosed brown manila envelope and seal it. Then complete the information on the envelope and return it to your CBPO who will place the booklets in the mail.

SECTION II. OCCUPATIONAL ATTITUDE INFORMATION

This part of the inventory asks you to indicate your attitude about specific aspects of your present job. On the following pages are a number of statements. While some of these statements may appear similar to each other no two items are identical.

Read each statement carefully. Then decide for yourself whether you are satisfied or dissatisfied with that aspect of your present job. Indicate "how satisfied" or "how dissatisfied" by choosing the statement below which best represents your attitude. Then fill in the appropriate circle in the right hand column.

Mark 1 if you are EXTREMELY DISSATISFIED

Mark 2 if you are VERY DISSATISFIED

Mark 3 if you are MODERATELY DISSATISFIED

Mark 4 if you are SLIGHTLY DISSATISFIED

Mark 5 if you are NEITHER SATISFIED NOR DISSATISFIED

Mark 6 if you are SLIGHTLY SATISFIED

Mark 7 if you are MODERATELY SATISFIED

Mark 8 if you are VERY SATISFIED

Mark 9 if you are EXTREMELY SATISFIED

For example, if you are VERY SATISFIED with the first job aspect on the next page, Air Force's efforts to remove irritants and sources of dissatisfaction, you would fill in circle number 8 123650000 If you were VERY DISSATISFIED with this aspect you would fill in circle number 2 and if you were NEITHER SATISFIED NOR DISSATISFIED you would mark circle 5. Mark only one circle for each job aspect. Caution: Completely fill in the circle you have chosen but do NOT overlap into other circles on the same line. Answer every item. Please work quickly and do not go back to previous items. Give a true picture of your feelings about your present job.

SECTION III. IMPORTANCE OF JOB ASPECTS TO CAREER DECISIONS	000000000
	000000000
At the end of your current enlistment there may be	
several job factors influencing your decision to reenlist,	000000000
separate, or retire from the Air Force. This last section of	
the inventory asks you to indicate the influence which spe-	0000000000
cific job aspects will probably have on your decision.	
get appears will productly have on your decision:	000000000
Read the next series of statements carefully. Then	
decide how important each stated job aspect may be in influ-	+
encing future career decisions. Use the following scale to	000000000
indicate the amount of expected influence.	
mulcate the amount of expected influence.	000000000
	OQ O O O O O O O
	000000000
1 2 3 4 5 6 7 8 9	000000000
	000000000

APPENDIX F: FACTOR DEFINITIONS OF 35 FACETS OF JOB ATTITUDE COMPRISING THE FACTOR SPACE OF 190 JOB SATISFACTION ITEMS

Area Cost of Living - Area costs and standard of living you are able to maintain in your area of assignment.

Assignment Locality - The desirability of your current assignment locality. Includes weather, recreational and educational opportunities, and other characteristics of the base and surrounding community.

Base Housing and Eating Facilities - The quality and availability of base housing and eating facilities.

Benefits Provided by Base Facilities - BX, commissary, educational, recreational, transportation, and medical facilities provided by the base or immediate vicinity.

Continuing Job Training - Instructional methods, required training, and use of up-to-date equipment associated with pace of new developments in your field. Includes receiving civilian educational credit for training.

Control Over Work and Personnel - Degree which job gives you control over personnel, material, and procedures in getting the job done.

Co-workers - Teamwork, willingness to work, technical competence, friendliness, and respect for others displayed by your co-workers.

Economic Security - The feeling of current and future (retirement) economic security you have in the Air Force. Includes comparability of your pay and benefits to those available to you in the civilian environment.

Family Attitude Toward Job - The pride and recognition of your family for the work you do.

Independence - The independence your job and your unit's policies give you in the performance of your work and time off activities.

Job Design - The work efficiency which your job affords due to the organization and types of tasks performed. An inefficient job design is one requiring excessive paperwork and coordination with others, rush and slack periods, and performance of additional duties.

Knowledge of Results - The opportunity to know how well you are performing based on information received during performance of job related tasks. Supervisor feedback is not included.

Leave and Time Off Policies - Leave, time off, and working schedule policies of your unit.

Opportunity for Social Contact - Opportunities for contact with others during the performance of your job assigned tasks.

Personal Growth and Development Opportunities - Educational, recreational, and off-duty financial self-improvement opportunities provided by your job and facilities of surrounding community.

Physical Activity of Job - Performance of job related tasks which aid your physical well being through healthy activity without violating your moral well being.

Physical Demands of the Work Environment - Danger and physical demands of your job through exposure to chemicals, temperatures, noise, and unclean conditions.

Physical Characteristics of the Work Environment - The physical characteristics of your work area including lighting, space, cleanliness, appearance, noise level, personal conveniences, safety devices, and physical comfort afforded.

Promotion Opportunity - Opportunities for promotion based on your type of work and quality of performance.

Recognition - Recognition, respect, and special opportunities that result from giving a good job performance.

Safety, GMT, Promotion Policies and Procedures - Air Force and unit policies and procedures concerning safety, general military, on-the-job, and physical fitness training and dissemination of information concerning the promotion system.

Social Contact (Non-Peer) - Opportunities your position as an Air Force member provide to meet, help, and work with people other than your co-workers.

Status in Civilian Community - Your status in the civilian community as a result of being a member of the Air Force.

Sufficiency of Training - The adequacy of training received to perform your job and the availability of programs and materials for continued improvement in job related skills.

Supervisors' Competence - Managerial and technical competence of supervisors including ability to look after the welfare of their subordinates.

TDY Costs and Conditions - Living and working conditions, disruption of off-duty activities, and adequacy of reimbursements for expenses incurred by TDY.

Temperatures in the Work Environment - Temperatures associated with your work environment and surrounding area.

Tools, Equipment, and Supplies - Availability, condition, and adequacy of tools, equipment, supplies, and training materials.

Travel Requirements and Opportunities - Frequency and types of travel opportunities available to personnel in your specialty. Includes frequency and locations (overseas/remote and CONUS) of PCS requirements.

Value of Experience - Value of your job obtained skills in the civilian job market.

Variety and Utilization - Variety in the kinds of tasks performed and the manner in which your job utilizes your civilian education and training.

Welfare of Members - The medical care provided by the Air Force and your opportunity to improve the welfare of others.

Work Climate - The overall atmosphere in which you perform your job. Includes the influences of close associates on the job, personal conveniences provided in the work area, efforts to remove irritants and sources of dissatisfaction, frequency of required training, contribution work makes to National Defense, and type of supervision received.

Work Itself - Overall rating of your job. Includes challenge, interesting nature, feelings of accomplishment, importance, way your talents are utilized, variety, and self-improvement opportunities associated with your job.

Work Schedule - Your work schedule including the number of hours and time of day worked, flexibility of schedule, and opportunities for off-duty activities afforded.

APPENDIX G: FACTOR LOADINGS FOR PRIMARY ITEMS RELATED TO 35 FACTORS FROM A DOMAIN OF 190 JOB ATTITUDE STATEMENTS

Area Cost of Living

<u>Item</u> Number	Factor Loading	<u>Item</u>
60	.679	The cost of living in the area to which you are assigned.

140	.551	The weather at your base.
129	.443	The size of the surrounding community.
174	.387	The recreational opportunities provided by the surrounding community.
120	.299	The size of your base.
105	.243	Normal temperature of your work environment.
177	.217	Amount of time you must work in extreme temperature.
40	.203	The educational opportunities proved by the surrounding community.

Base Housing and Eating Facilities

<u>Item</u> Number	Factor Loading	<u>Item</u>
187	.697	The quality of base quarters, barracks, or civilian housing in which you live.
134	.663	The on-base housing.
188	.538	The quality of food and availability of eating facilities at your base or location.
185	.286	On-base and off-base transportation facilities.
189	.261	The opportunity for an off-duty job.
114	.250	Convenience of the location of the work area to mess facilities.
182	.245	The extent to which your military pay covers your living expenses.

Benefits Provided by Base Facilities

<u>Item</u> Number	Factor Loading	<u> Item</u>
51	.698	The BX and commissary facilities at your base.
84	.605	The facilities provided by the base.
174	.340	The recreational opportunities provided by the surrounding community.
143	.301	The quality of medical care provided by the Air Force.
120	.271	The size of your base.
129	.210	The size of the surrounding community.
185	.206	On-base and off-base transportation facilities.
40	.201	The educational opportunities provided by the surrounding community.
188	.201	The quality of food and availability of eating facilities at your base or location.
86	.198	Your fringe benefits compared to fringe benefits offered by a civilian job.

Continuing Job Training

<u>Item</u> Number	Factor Loading	<u> Item</u>
71	.331	The pace of new developments in your field.
90	.292	The chance to receive civilian educational credit for your military job training.
85	.279	The physical demands of your job.
70	.250	The instructional methods used in your training.
12	.244	The need for frequent retraining within your specialty.
89	.242	The opportunity to use up-to-date equipment.
92	.242	The amount of work you have to do.

Control Over Work and Personnel

<u>Item</u> Number	Factor Loading	<u>Item</u>
33	.534	The chance to tell others what to do.
36	.444	The control your job gives you over material.
32	.424	The chance to try different methods on your own.
35	.388	The amount of time you spend in job-required communication.
45	.311	The chance to feel responsible for a total unit of work.
23	.310	The chance to improve the welfare of others.
42	.303	The opportunity to have some control over the time spent with others.
37	.293	The availability of useful self-help training materials.
170	.275	The control your job gives you over people.

Control Over Work and Personnel (Continued)

<u>Item</u> <u>Number</u>	Factor Loading	<u>Item</u>
24	.268	Your training in where and how to get needed technical information.
31	.266	The chance for meaningful social contact in your work.
112	.245	The opportunity to decide for yourself how to accomplish your job.
26	.220	The priority given to your requests for supplies.
104	.218	The chance to work by yourself whenever you feel like it.
30	.216	The amount of "red tape" connected with your work.

Co-Workers

<u>Item</u> Number	Factor Loading	<u>Item</u>
152	.575	The "spirit of teamwork" which exists between your co-workers.
73	.569	Your amount of <u>effort</u> compared to the effort of your <u>co-workers</u> .
74	.551	The importance attached to your job by your co-workers.
41	.543	The amount of pride your co-workers have in their work.
167	.534	The extent to which those you work with "share the load".
94	.494	The "know-how" of the people you work with.
61	.471	The friendliness of your co-workers.
106	.447	The recognition co-workers give to your work.
175	.425	The amount of competition among your co-workers.

Co-Workers (Continued)

<u>Item</u> Number	Factor Loading	<u>Item</u>
3	.412	The moral standards of your co-workers.
77	.405	The amount of cooperation required.
123	.312	The amount of dependence on others to get the job done.
67	.280	The closeness with which you have to work with others.
75	.256	The chance to work with different people if you want to.
163	.255	The extent to which tools and equipment are shared by co-workers.
132	.246	The opportunity to associate with people you like.
42	.244	The opportunity to have some control over the time spent with others.

Economic Security

<u>Item</u> Number	<u>Factor</u> <u>Loading</u>	<u> Item</u>
78	.614	The feeling of economic security you have in the Air Force.
52	.600	Your pay compared to what you could make on the outside.
